Equip and control robotic fleets the 21st century way. Running different cleaning robots from many different manufacturers in a single fleet professionally with FieldBots software.

FieldBots is not just about cleaning; it's about effortless maintenance. Say goodbye to the hassle of manual cleaning and charging your vacuums as FieldBots takes care of it all! With cutting-edge software that can effortlessly manage multiple machines from any manufacturer, giving complete control to the individual users' needs in their facilities.

Through self-mapping technology, FieldBots navigates the area that needs cleaning and begins vacuuming once it has mapped the area. FieldBots enables cleaning robots to learn, adapt, and change through an intelligent system. With this innovative selfmapping technology, cleaning can be completed without requiring cameras or microphones, guaranteeing complete privacy. All FieldBots systems hold valuable information securely within Europe to ensure the highest protection, security, and compliance.

With further intelligent mapping capabilities, FieldBots software automatically maps and can be edited to implement unique cleaning zones by editing the names of rooms on the software, merging and splitting a layout to make cleaning even more niche to each user depending on zone, spot, or total cleaning.

In-app alerts with detailed statistics and reports on the total fleet or per unit exports to ensure cleaning has been fulfilled and live tracking of each bot's cleaning path.

Convenience is key, with remote access available to start the cleaning process. With just a few taps on your smartphone, you can unleash the power of FieldBots from anywhere in the world. Once the cleaning is complete, FieldBots sends an email alert, ensuring the user is updated.

FieldBots OS Annual License Product Code: 822880

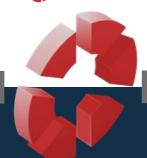

Be free of manufacturer dependency software

FieldBots OS is the operating system for automating industrial cleaning who continue to integrate service robots of multiple dsciplines and from many manufacturers into their native and scalable cloud.

So finally effortless management of even huge robotics fleets in realtime becomes reality.

FieldBots Connect (The Brain)

FieldBots Connect is the secure and compliant data hub that handles the data exchange between the bots and the ecosystem. The data is prepared uniformly and kept up-to-date via a cloud-to-cloud connection status codes, statistics and commands can thus be viewed and delegated.

on the brandindependent fleet management for cleaning robots

Dry vacuum robot with intelligent docking station

Professional dry vacuum cleaning robot with an intelligent docking station that is paired with the fleet management software FieldBots!

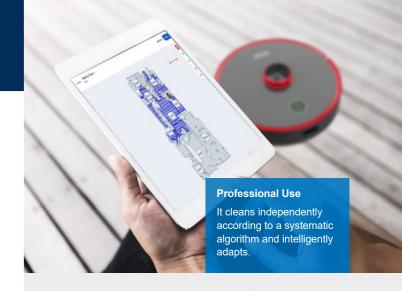

A unique vacuum cleaning robot concept specially developed for professional use on all floor types. The S170 Navi machine independently cleans according to a systematic algorithm which is enabled by FieldBots, so all cleaning is efficient and tracked. The docking station charges the battery and empties the dust tank, so it is fully automated, ensuring the S170 Navi is always charged and ready to clean your facilities at the click of a button from the FieldBots software. Once charging/dust emptying is complete, the robot continues cleaning at the previous position.

The innovative docking station has a suction function which means no need for daily dust tank emptying, which significantly reduces the maintenance workload in your operations. Using this docking station, minimises the need for manual intervention by your cleaning staff, resulting in reduced time and effort required for daily/weekly maintenance.

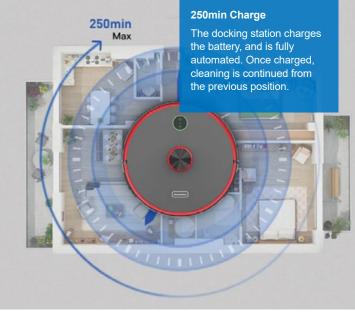

The roller brush with rubber blades and brushes helps to collect even deep-seated dirt. The built-in HEPA filter and regular vacuuming help to reduce dust debris in your facilities and thus increase the well-being of your employees and customers.

The S170 Navi cleans on-demand or on schedule at the touch of a button, as well as controls your fleet management. The seamless FieldBots integration allows fleets of several hundred robots to be centrally managed in one tool.

The seamless FieldBots integration allows fleets of several hundred robots to be centrally managed in one tool.

Flexible and controlled single-sheet dispensing

Hygienic, efficient, and versatile WypAll[®] Reach Plus[™] centrefeed dispensing system.

The WypAll® Reach Plus™ centrefeed dispenser is a new, innovative wiping system that provides flexible and controlled single-sheet dispensing of Kimberly-Clark Professional™ General Clean wiping rolls. The hygienic no-touch dispensing system ensures wiper rolls are fully enclosed to minimise contamination whilst encouraging efficient use of the paper wipes. It is a clean and practical option for any facility, helping to reduce paper consumption and environmental impact.

Available in four options with each variant allowing for optimised use in any environment. With Fully versatile, the dispenser can be easily mounted above a sink, beneath shelving, or against a cupboard or door. Traditional is ideal for wall mounting, allowing the conventional pull-down dispensing. The Specialist dispensing option can be attached beneath a workstation and is perfect for industrial environments. The final option, Freestyle, can be used on multi-surfaces such as kitchen islands, trollies for cleaning, or on the go.

Centrefeed rolls account for over 60% of paper used in the UK wiping arena, and with the typical user taking 2m of blue roll for each use, controlled dispensing is highly critical for driving down the environmental impact of our cleaning solutions, not least the cost of unnecessary paper used for the job.

Robert Scott® wanted to take the traditional, semi-disposable mops further and make them more environmentally friendly to prevent waste from going to landfill.

With that in mind, they've created the Refill Socket Mops. Manufactured with a patented mop socket that easily and securely clips the mop head into place, you can effortlessly replace refills to reduce plastic waste and save money. Sockets are colour-coded to blue, red, green, yellow, and white to meet HACCP standards. The colour-coded clips help prevent cross-contamination, making mopping more hygienic, cost-effective and eco-friendly. The sustainable refill sockets and clips can be washed and reused hundreds of times.

Manufactured in Robert Scott's Lancashire mills in the United Kingdom, Socket Mops use by-products that would have otherwise ended up as waste in landfills. The Big Refill Socket Mop consists of a reusable socket that can be used numerous times, whilst the disposable yarn refills are much easier to recycle at the end of life.

Quick and easy change

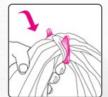

Fit mop head into

Secure socket with

Mop floor.

Replaced with new mop head

Simply unclip the old mop head, clip a new one in and carry on your cleaning operations in an even more sustainable way – a simple yet cost-effective and sustainable alternative to disposing of mops.

In addition, help reduce stock holdings and plastic consumption by adopting mop clips into your

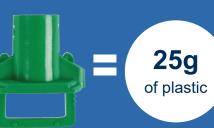

businesses. These clips eliminate having to purchase specific mops for cleaning tasks, as the colour-coded clips can be detached and attached to different style mops, streamlining your cleaning and reducing costs. Help control budgets and use Robert Scott clips and refill mops!

25g of plastic. To calculate how many kilograms of plastic your business can save, multiply the number of mops you use a week, month, or year by 0.025!

If all mops were Refill mops, Robert Scott stated they could save nearly 600 tonnes of plastic a year, the equivalent of 30 million plastic bottles or the weight of 50 double-decker buses!

Bunzl Cleaning & Hygiene Supplies demonstrated to a customer if they switched to the reusable clip and refill mop head system, based on their annual usage, they could avoid using 1.5 tonnes of virgin plastic a year.

A single solution to urinal blockages, tackling the source and eliminating washroom odours!

Innovative Features & Benefits

Eliminates urinal odours

Reduces carbon emissions

Saves water

Reduces single-use plastic

Reduces urinal blockages

ABS' Sustainability Calculator and see the savings your business can achieve!

URIZAP is a cost-effective and highly efficient powder-based remediation treatment designed to target uric acid scale build-up and eliminate odours at their source. What sets URIZAP apart is its purpose-specific bacterial composition, providing an unbeatable preventative maintenance solution for consistently maintaining odourless and blockage-free urinals.

This world-first solution is an environmentally friendly alternative to harsh chemicals with various sustainability benefits and is suitable for flushing and waterless urinals. To put it into perspective, based on over 250 trials, if URIZAP is used in 1,000 urinals, it can save between 10 and 30 million litres of water, over 11,000 litres of harmful chemicals, around 25 tonnes of carbon emissions, and a staggering 14 tonnes of single-use plastic annually!

Current methods to resolve blockages are costly, toxic, temporary, and labour-intensive, while odour issues are usually only masked with fragrances and mats. URIZAP provides a comprehensive solution to both of these problems. Regular use prevents their recurrence, saving

you time and resources, increasing efficiency and productivity, and delivering significant cost savings.

URIZAP is non-hazardous and safe for both humans and aquatic life. After an initial shock treatment period, a single 25g scoop, packed with beneficial bacteria, applied each week directly into the bowl is all you need to keep each urinal free of odours, blockages, and costly repairs. Within two weeks, you'll witness a remarkable reduction in odours, making URIZAP the perfect product to maintain washrooms of all types, from high-traffic public areas to upscale restaurants. URIZAP ensures that complaints about odours are kept to a minimum and urinals remain consistently free-flowing.

fah LITTLE BAG

Sustainable. Sealable. Responsible.

FabLittleBag is a sustainably sourced disposable bag for tampons and pads that can be opened with one hand for quick and simple use. Designed with patented finger loops to make the bags even more hygienic in use and allow for easy and secure disposal of sanitary products.

The bags seal firmly, locking in the contents and any odour. They are also completely opaque for discreet disposal. Further benefits to businesses are that the sealed packages keep all types of bins clean and odour-free, creating a better experience for all. Businesses that have already adopted FabLittleBag have seen reduced costs and inconvenient sewage blockages caused by the flushing of tampons and pads down toilets.

How to use:

BIN

No Stress, No Mess.

As well as improved cleanliness and a better cubicle experience, FabLittleBags help to improve your business' sustainability impact.

Help to directly protect rivers and oceans by adding FabLittleBags into your washrooms to reduce sanitary products being flushed down toilets.

Sanitary Disposal Bags

FabLittleBag transforms the uncomfortable disposal experience into a relaxed, confident, hygienic one. Reducing excess toilet roll consumption, keeping your bins cleaner, and allowing more waste to fit into bins, FabLittleBag complements sanitary bins and normal bathroom bins alike. 88% of individuals admit to leaving washrooms as quickly as possible if bins smell bad, without washing their hands – contributing to the spread of germs and unhealthy washrooms. FabLittleBag means fewer blockages, cleaner bins, no smells, a better experience, and happier customers.

80% of consumers stated they wanted brands to help them live more environmentally friendly and ethically, and with FabLittleBag, you are showing that you are putting those needs front and centre.

Made from carbon dioxide-absorbing sugarcane, recycled plastic to support the circular economy of waste, and vegan glue to seal closed, the FabLittleBag showcases sustainability directly to your users whilst promoting improved inclusivity and diversity targets and educating guests, employees, and visitors.

Did you

know?

Every year in the United Kingdom, 2.5 million tampons and 1.4 million pads are flushed down the toilet each day.

40-50%

of users habitually flush tampons and pads down the toilet causing blockages and directly polluting the rivers and oceans.

Game-changing.

SIMPLE, SMART AND SUSTAINABLE HAND SOAP

Cost controlled and safe soluble sachet refill solution

Small packs reduce storage required on-site by 95%

Reduced carbon footprint as zero water is transported

Vegan friendly formula and not animal tested

Eliminates single-use plastic packaging waste

Excellent foaming hand and body cleansing

PRISTINE® Foaming Hand Wash Soluble Sachets offer a simple, smart and sustainable alternative to bulk-fill liquid hand soap.

Introducing the new PRISTINE® foaming hand wash soluble sachets with a refreshing Sakura Blossom fragrance. This luxurious foaming handwash eliminates single-use plastic and reduces carbon emissions associated with transport by 95%!

The sustainable choice in handwashing, the soluble sachet is simple and safe with dosing pre-measured so costs are fully controlled, with no wasted content. Delivered in concentrate sachets, PRISTINE® hand wash sachets reduce carbon footprint; there's no heavy water to transport as the product is prepared on-site when a sachet is diluted with water for use in a soap dispenser or pump bottle.

PRISTINE® Soluble Sachets saves up to 95% on-site and transit storage compared to bulk-fill liquid soaps. One pack of 20 soluble sachets makes 10-20 litres of product, making it ideal for any size storage cupboard. The recycled paper pouch packaging is recyclable and compostable, meaning no plastic packaging waste. Furthermore, the vegan hand wash formulation is manufactured to the highest quality standard and is dermatologically tested (without animal testing) to show your environmentally friendly and sustainable stance further.

Black Foaming Soap Dispenser Product Code:

061195

PRISTINE® Sakura Blossom Soluble Sachets is available in two use options. One small pack of sachets is easily dispensed by simply mixing one predosed sachet with water in our 500ml PRISTINE® Reusable Pump Bottle. Alternatively for high-traffic washrooms, the larger sachet can be mixed with water, and used with any bulk-fill foaming hand wash dispenser, providing up to 1 litre of product per sachet.

Our PRISTINE® Myriad Foaming Soap Dispensers are compatible with the sachets for easy, controlled dispensing and come in black or white to suit any washroom style. The black PRISTINE® Myriad dispenser range is now made from recycled materials.

Simple and easy to use, just add water...

Fill the bottle with water to the 1L fill line

Place 1 sachet into the bottle

Gently agitate until fully dissolved

Leave the solution for 10 minutes

Pour solution into dispenser

1 pack of 20 sachets

PRISTINE Foaming Hand Wash Sachets reduces space, packaging and carbon emissions associated with transporting full bottles of liquid soap to your establishment.

Social

Every day it feels like there's another bit of bad news out there about the environment. It feels insurmountable. It's clear the world has serious issues.

This is why four social entrepreneurs got together in 2020 and created Serious, a Social Enterprise business. Four fathers of young children who wanted to do something about climate change and make a difference in their futures.

Serious Tissues is a toilet roll business that plants trees with every sale and now has a full range of paper products for the home and workplace. In just three years Serious Tissues have planted over 1.7 million trees, and are currently planting the tree equivalent of four Hyde Parks every single week!

Serious have successfully tapped into a growing movement among big companies looking to make a positive impact. Major organisations such as Accenture, Siemens, CBRE, BT and AXA have signed up to portals such as the Social Value Portal or SEUK's Buy Social Corporate Challenge, pledging to shift billions of spend towards companies making a positive impact.

IT'S TIME TO GET SERIOUS...

As well as planting trees, Serious Tissues are 100% recycled, Carbon Neutral, UK made and plastic free.

They offer a paper range that includes toilet paper, hand towels and blue rolls. They have also expanded into liquid soap and laundry products with a model that recovers 1kg of ocean-bound plastic* with every unit. That's the equivalent of 50 plastic bottles or 500 crisp packets stopped from finding their way into the ocean.

SERIOUS works with local communities, providing employment for those who need it. Currently, Serious plants trees in the UK, Nepal, Indonesia, Madagascar, Mozambique, Kenya, Ethiopia, Haiti, Colombia, and Central America.

They plant a wide variety of tree species that are native to the regions they are planted in.

So, if you think it's time to get Serious about the environment, perhaps it's time to make a change.
