Product description

Graffiti Remover utilises bio-based additives which remove graffiti such as ink, permanent marker and spray paint from a variety of surfaces.

Core benefits

- Removes graffiti including felt tip pen, marker pens, ballpoint inks, spray paints and general inks from surfaces
- Does not damage the surface underneath or put the user at unnecessary risk
- Fast acting, effective and safer alternative to traditional graffiti removal products
- No chlorinated solvents, petroleum solvents, or flammable alcohols
- Sustainable, naturally derived, readily biodegradable, powerful bio-based, detergent blend. Made from corn, soy, and citrus solvents
- Concentrated formula, reducing the cost per application

How does it work?

The bio-based solvents work by effectively breaking the molecular bonds between the graffiti and the surface safely and easily allowing for effective and complete removal.

Directions for use

Coverage rates for graffiti removal vary significantly depending on factors such as: age of the graffiti, type of graffiti, thickness of the graffiti, temperature, moisture, porosity, substrate and equipment used.

For general graffiti removal, wipe the surface clean to allow effective product penetration. Apply product undiluted to a dry surface. Contact time on the surface is critical. The longer it is left the deeper it will penetrate. Allow a minimum contact time of at least 5 minutes for penetration. Rub surface with a hard brush or scourer to loosen graffiti residues and repeat as necessary keeping the affected area wet with Graffiti Remover. Rinse surface with water with a pressure washer.
GRAFFITI REMOVER

For poster and gum removal, apply product to surface and wait 5 minutes. Peel/scrape from surface and then rinse with water.

Product specification
Contains: Cleaning agents, bio-based solvents

Pack Sizes
5 Litres
