Breakthrough fully biodegradable gloves

Innovative Features & Benefits

- Gloves biodegrade using Eco Best Technology®
- Accelerates biodegrading of glove once in landfill by up to 100 years
- Breaks down into organic soil, methane and carbon dioxide
- Food safe and chemical resistant

With sustainability such a hot topic within the sphere of cleaning, Globus have pushed the boundaries with their new glove based technology.

The Globus SHOWA 6110PF uses Eco Best Technology® (EBT), a breakthrough innovation which doesn't change the way you dispose of your gloves, but the process and speed with which they degrade afterwards.

During the production process, a unique Eco Best Technology® (EBT) organic additive is infused within the gloves material.

The EBT organic additive is designed to make the respective gloves attractive to microbial activity when disposed in landfills. These microorganisms then consume, metabolise and break down EBT materials into three natural compounds - organic soil, methane and carbon dioxide.

For the EBT to work, it requires biologically active landfills for biodegradation. This ensures that the gloves will not begin to degrade before it reaches the landfill.

This accelerates the biodegradation rate compared to regular nitrile gloves.

With EBT, SHOWA accelerates each glove's biodegradation process by up to 100 years (depending on climate and location of landfill).

These abilities have been validated by independent certified laboratories using ASTM International test methods (ASTM D5511).

KAITUTOR

Training when, where and how your workers need it

Innovative Features & Benefits

- On-board "Personal Trainer" provides professional training anytime, anywhere
- Uses updatable portable media — No Wi-Fi connection and data usage fees
- Workers Play-Pause-Practice™ watching easy to understand, real-world training scenarios with experts demonstrating best practices
- Readily available, on-going training minimizes the impact of turnover and unskilled workers
- Reduces need for technicians and improves self-reliance
- Maximizes the return on equipment investment
- Available for all Kaivac cleaning systems

Training is a critical component of any quality cleaning program, especially in an industry frequently overwhelmed by high turnover and unskilled workers.

KaiTutor from Kaivac solves the training dilemma with its on-board training and documentation system. With KaiTutor, users can learn quickly and at their own pace - anytime, anywhere.

KaiTutor helps cleaners by delivering critical operational and educational information right when and where it's needed – on the job. The result is "just-in-time" skill building for improved performance and productivity.

Mounted directly to Kaivac's cleaning systems, the KaiTutor makes personal training readily available in a stimulating format. Now, even inexperienced workers can quickly become highly productive cleaning professionals. And, it's a convenient way to reinforce prior formal training.

Recent Innovations, like Kaivac's

No-Touch Cleaning® and OmniFlex™ systems, greatly enhance the quality and efficiency of cleaning. Sadly, many organizations can't exploit these advantages because they lack timely and effective training, especially those with high turnover or an unskilled workforce. KaiTutor, the "anytime, anywhere personal trainer," facilitates the adoption of new technologies by eliminating these barriers.

The KaiTutor video modules show experts demonstrating best practices in real-world cleaning scenarios. This is perfect for Kaivac's simple Play-Pause-Practice approach: play the video, pause it after a procedure is demonstrated, and then go practice it. Repeat as necessary to master the cleaning procedure. Studies show that this method of viewing the video coupled with hands-on practice helps students grasp the information more quickly and retain it longer.

Along with the KaiTutor, Kaivac provides a large and growing library of information covering such topics

as operational procedures, routine maintenance, troubleshooting, repair, machine-specific overviews, tips, tricks, and more. In addition, Kaivac can work with customers to develop customized educational or organizational content. Because of its intuitive menu-based navigation, all content can be accessed easily by anyone, anywhere.

With instant access expert help, including troubleshooting and repair, users can reduce their dependence on outside suppliers, trainers and service technicians. This not only reduces costs, frustration and down time but it also improves productivity and cleaning outcomes.

GRAFFITI REMOVER

The green way to tackle tough to remove graffiti

Innovative Features & Benefits

- 3 applications in 1 – quick versatile cleaning response
- Does not damage the surface underneath
- Low toxicity, readily biodegradable, low VOC & odour
- 0% manufacturing waste

Chewing gum, black marks and graffiti are almost always an unsightly and unwelcome adornment to any building, workplace or general landscape. The removal is invariably laborious and time consuming. To address the problem, the team at BioHygiene have created a highly advanced 3 in 1 Gum, Mark & Graffiti Remover that is fast-acting, effective, versatile and safer than traditional products.

The low odour increases operator comfort during use and the low VOC content and high flashpoint avoids flammability hazards during storage and use. The eco-friendly solvents that make up the gum, mark & graffiti remover work by effectively breaking the molecular bonds between the contamination/marks and the surface, so soils can be quickly and easily wiped, scraped or rinsed away - allowing for effective and complete removal.

Developed using a readily biodegradable raw material from a manufacturing by-product, product characteristics include low oral and eco-toxicity profiles and an absence of traditional chlorinated and aromatic solvents. It can be used safely in confined spaces and enclosed areas - making it suitable for internal and external usage. Crucially, the remover does not damage the surface of the area to which it is applied.

This eco-friendly formulation is cost effective and comes in a ready to use, concentrated formulation suitable for use on nearly all surfaces. The 'green' nature of the product means it is safer for humans, animals and the environment. It is available in 750ml or 5L platforms and bottled in PCR plastic offering an 85% reduction in CO₂ in comparison to standard plastic bottles, further improving the environmental profile.

C85 NON STOP CLEANING SYSTEM

The modern alternative in hygienic cleaning

In our world, water is precious. Whilst life depends on it in all its various ways, only 1% of it is usable for human activity. In a climate where we are becoming increasingly aware of the effect of our choices on the environment around us, the management of our water supplies are crucial.

The cleaning industry relies heavily on water including in the cleaning machines used to create clean and safe environments. Comac have been on a journey to create machines which clean incredibly whilst reducing their impact. Their latest release is their next big leap, the Comac C85 Non Stop Cleaning System.

Innovative Features & Benefits

- Recycles water through 3 stage filtration system
- Cuts down on downtime creating, labour, chemical and water savings
- Save up to 80% on water costs
- Drastically reduces pit-stops and down times

The C85 floor scrubbing machine has an innovative technical solution which recycles the water used for floor cleaning via an integrated water filtration system. The clever concept works in three stages. Firstly, the water is used normally and collected by vacuuming into the recovery tank. In the second stage, the water is filtered and purified in the filtration tank, ready to be used again in the third stage solution tank.

The cleaning system is so efficient at recycling water, it can be used for up to one week, cutting down drastically on water and chemical consumption, and pit-stops. Additionally, the operator no longer needs to spend time repeatedly having to dump and refill the machine.

Granule Shock Powder

The 100% environmentally safe unique bacterial formula

Unpleasant odours and slow draining toilets - these are the signs of a blocked soil stack.

This issue is normally dealt with via the utilisation of harsh chemicals or the practice of high pressure hosing; however, both of these methods are harmful to the pipework and environment.

The latest treatment from eco WMT, 'eco tabs shock, eliminates these concerns. By harnessing non-pathogenic, eco-friendly, non-corrosive bacteria - the product digests the foul as well as toilet paper within a soil stack – eradicating blockages. Since eco tabs employ natural ingredients, no COSHH/PPE is required when handling – simply flush once a week for on-going prevention!

So, whether you have a problem with hydrocarbons, uric acid build-up, blocked grease traps or polluted waters, Eco Tabs' unique bacterial formula will digest all of it naturally.

Innovative Features & Benefits

- Eradicate unpleasant odours and slow draining toilets
- No need to use harsh chemicals to unblock
- Not harmful to pipework and safe for the environment
- Harnesses non-pathogenic, eco-friendly, non-corrosive bacteria
- No PPE required when handling
- Simple to use
